

Measure. Monitor. Manage.

Wysine Solution for Gated Communities and Apartment Complexes

The main challenge is to be secure while providing the convenience of freedom of movement. Maintaining a secure environment for the residents while not hindering their visitors is of paramount importance.

The key requirements for such an environment are:

- **Video Surveillance of common areas** - Areas such as lobbies, pools, gym, children's play areas, club houses, walkways, corridors, entrances and exits
- **Easy access to residents** - achieved through a combination of license plate recognition at the gates and readers at other key entrance and exit points
- **Effective visitor management** - Access card based monitoring which can be used to track areas visited, time of entry and exit, associated vehicles, person visited and set an expiry time. Audit trails can be maintained to ensure that all visitors are accounted for periodically.
- **Energy monitoring and control** - systems to monitor the energy consumption of common area facilities such as lifts, lighting, water pumps, recycling units etc. Energy monitoring can also be for individual apartments or houses.

Wysine's unique solution architecture allows for access, video and energy monitoring components to be connected to the same backbone, thus reducing cost of cabling, maintenance costs and improving scalability.

INTEGRATED SOLUTION

Hardware integration provides the benefit of response time and ability to link events.

FLEXIBLE & SCALABLE

Solution flexibility comes through the software interface. Unique architecture enables scalability with low incremental costs.

BUSINESS PRACTICES INTEGRATION

Integration with existing business processes enables better prediction, planning and analytics. Helps companies control their OPEX.

Manage

REMOTE MANAGEMENT

The solution is IP enabled, allowing for monitoring and configuring over the internet. IP enabling also allows for data from different locations to be integrated at one site.

TAMPER PROOF

Each component of the system is designed to be tamper-proof. This is achieved through a combination of battery back-up and monitored circuits which raise an alarm when misuse is detected.

TURNKEY SOLUTIONS

If any of our custom solutions don't meet your specific needs, Wysine can develop it for you on a turnkey basis.
