

Measure. Monitor. Manage.

Wysine Solution for Hospitals

One of the challenges for any hospital is to be secure while providing the convenience of freedom of movement. Both visitors and hospital staff would like to avoid un-necessary bottlenecks that could get created due to processes implemented for security.

One of the solutions could be to separate the hospital into public access zones and multiple levels of controlled access. Sensitive areas in a hospital could be pharmacies, storage of hazardous material, cashier, data cabinets and certain wards. All sensitive areas can be access controlled, not only to provide security but also to create audit trails for the movement of material.

- Visitor management solution that tracks and monitors visitor movement within the premises
- Access control to protect sensitive areas such as pharmacies, radiation labs, certain wards etc.
- Tagging of assets results in managing them better

Integrated systems can help in more efficient patient monitoring and for creating a trail of patient movements and responses. Integration of access cards and video surveillance can be used to record patient movements and to capture on camera the entry and exit of the patient to access controlled areas.

Wysine's unique solution architecture allows for access, video and energy monitoring components to be connected to the same backbone, thus reducing cost of cabling, maintenance costs and improving scalability.

INTEGRATED SOLUTION

Hardware integration provides the benefit of response time and ability to link events.

FLEXIBLE & SCALABLE

Solution flexibility comes through the software interface. Unique architecture enables scalability with low incremental costs.

BUSINESS PRACTICES INTEGRATION

Integration with existing business processes enables better prediction, planning and analytics. Helps companies control their OPEX.

REMOTE MANAGEMENT

The solution is IP enabled, allowing for monitoring and configuring over the internet. IP enabling also allows for data from different locations to be integrated at one site.

TAMPER PROOF

Each component of the system is designed to be tamper-proof. This is achieved through a combination of battery back-up and monitored circuits which raise an alarm when misuse is detected.

TURNKEY SOLUTIONS

If any of our custom solutions don't meet your specific needs, Wysine can develop it for you on a turnkey basis.
